MUSKINGUM COUNTY FIREMEN'S ASSOCIATION

RADIO/DISPATCHING GUIDELINES

Revised May 11, 2006

A committee from the Muskingum County Firemen's Association was appointed to look into radio traffic / Dispatching on 33.98 by President Hartman. The committee has met several times along with Dispatch Supervisor Kim Hambel and received input from the Dispatchers at Muskingum Fire Control. The group has agreed on the following revised guidelines for all Fire & EMS Departments in Muskingum County. All departments need to review these guidelines with their department so all members have a clear understanding of the guidelines.

1. All Emergency calls will be answered by M.F.C. (Muskingum Fire Control) through 9-1-1 or the county 7 digit emergency number. If you receive a direct or on station call you should notify M.F.C. of the call. They will create a call in C.A.D. (computer aided dispatch) and keep times.
2. M.F.C. will alert the appropriate agency by giving a voice message, tones, and the message repeated with the type of run, including name of residence. A 4 minute time is started now.
3. The department needs to acknowledge traffic from M.F.C. informing them they are clear and responding, (meaning a vehicle is physically responding) or clear and responding shortly. "In some cases the Chief or another officer may go direct to the scene and handle the situation or request". If M.F.C. hears no response in 4 minutes, the department is retuned. If there is no response in 2 additional minutes, M.F.C. is to start the next nearest mutual aid department. Should the original department then respond, mutual aid can be canceled by the original Department. M.C.F. will not keep toning for people. If they have not responded by now they are not going to. C.A.S. will be sent for EMS coverage if your department boundaries touch the city or there is no other department available.
4. M.F.C. needs to know when a vehicle is responding, (meaning physically responding). If they do not hear units responding after a reasonable time following the base taking directions; they will inquire if you are responding. If M.F.C. receives no answer, they are to dispatch mutual aid. It is important that departments do not respond by stating they are or will be responding and then allow many minutes to pass before telling M.F.C. they cannot respond. If you are unsure if you will get a crew, request mutual aid, it can always be canceled.
5. Use common language when communicating to each other. The use of Code 16 & code 99 could be the only exception to this. Say what you mean do not use codes.
6. M.F.C. needs to hear that you are responding and on the scene. Squads and each truck should mark responding, on scene, en-route to hospital, and back in service. Multiple units do not need to report back in service if they are all back in service at the same time. One unit can call in for all. M.F.C. does not need to know units are back on their station. Please remember that all departments in our county and a neighboring county share a common radio dispatch frequency. Please keep remarks short and in common language, clear, and professional. Please share the radio, especially if another department is being dispatched. Their traffic may be far more important than yours.
7. M.F.C. will assist in calling the needed utility and other support agencies. They have a direct line to do so. Use the closes address for a location. The utilities like the address better than the pole number.
8. Departments with high band radios are encouraged to use these radios to communicate directly with the paid services, hospitals, Zanesville Fire etc.
9. Medical Helicopter guidelines. When setting up a L.Z. (landing zone) give M.F.C. the address or closes cross street or intersection and they can obtain the Lat.- Long. for the helicopter with their mapping software. There is no need to give them the Lat. Long over the radio unless you have no other way of telling them where you are.
Hospital Frequency is to be used as the main channel with the county fire ground 33.66 103.5 as a backup or for departments that do not have the hospital channel. If you call for the helicopter and you do not have the hospital frequency

inform the dispatch to us 33.66 to communicate with Medical Helicopters . Dispatch will give this freq. to the Helicopters dispatch when they call for the helicopter. (Hospital 155.220 103.5 PL or Fire ground 33.66 103.5 PL Transmit and Receive) These frequencies are in the rolodex in dispatch.

10. When a department marks on the scene of an injury accident M.C.F. will advise which Law Enforcement is handling and the E.T.A. when it is available. A department may request law enforcement's E.T.A. if they are not on the scene in a reasonable time. 11. Wreckers are to be requested by the departments only when it is a quick clear incident, rescue or possibly a time delay for the department to the scene. The Patrol and S.O. need to follow a rotation set up by the county wrecker companies request.

12. The O.I.C. Should be the person to request mutual aid. The request should be made directly to M.F.C. for in county and to other out of county dispatch centers when applicable to save time and radio traffic.

13. Departments need to utilize one of the 4 fire ground quadrant frequencies as much as possible. The dispatcher has the authority to tell a department to go to a/your quadrant frequency if needed. They should be in the order specified in attachment. (see attachment) All departments are to use the 4 fire ground frequencies or their high band for runs and every day events. Dispatch also should tell a department to go to a/your quadrant frequency if there is other traffic.

Departments should do everything in their power not to talk on the cross patch systems. These have and do cause many problems due to them talking on a 100 watt or more radio. This is why the quadrant frequencies were set up. Most departments also have mobile repeaters in their vehicles that could be used instead of the cross patch systems.

14. If you need dispatch times, etc., please call 452-3637 ext. 148 Do not tie up the radio.

15. If there is some type of problem during the run the dispatcher will contact their Supervisor who will in turn contact the Department chief or officer in charge of the run after the incident is over and advise them of the problem. The chief or officer in charge should handle the problem. Only the Fire or E.M.S. chief should communicate with the Dispatch Supervisor to discuss problems with dispatch. **DO NOT CALL THE DISPATCHER!**

16. The use of the M.A.R.C.S. radio system is to be used for County or State wide emergencies only. Do not call M.F.C. on M.A.R.C.S. for everyday requests. The U.S.A.R. , Region 8 teams and departments with their own talk groups along with the S.E.R.P. plan will be using M.A.R.C.S. as their primary channel during an incident.

17. All Departments should follow the same numbering system within the county. Most are using their station number with each vehicle numbered after that. This is the best for M.F.C.. (200 station number with vehicles 201-202-203 etc.) examples " Engine 201 responding" "Squad 209 on scene" Departments are Grandfathered in to whatever they are using now until new equipment is put in service.

18. Departments should not respond to the scene of an incident that they are told that is not safe. M.F.C. should relay all the information about the incident to the departments. The emergency responders need to know what is happening at the scene as well as the deputies. We get more information by listing to the S.O. channel than on ours !!!

M.F.C. will assign a staging area that is close to the incident but not jeopardizing anyone. If this staging area is not suitable to you contact M.F.C. and give them the new staging area. If you are ahead of the Law Enforcement there is no need to run Emergency and then park and wait. The 4 minute time frame will still be used for a response with these types of incidents. There is no need for emergency response to get there and wait for Law Enforcement. M.F.C. will advise when it is safe to go in or to return to you station.

19. All Fax machines need to be made available to all members so they can get their times and the other needed information from them.

20. If you are going to be out of service for any reason you need to call M.F.C. 740-452-3637 ext 148 and advise them of this. M.F.C. does not need to know when a piece of equipment is on any type special detail unless they will need mutual aid sent at the time of call. If they are on a special detail and have a crew that can respond when the tones are set they do not need mutual aid sent. (parades, festivals, fire school, fair grounds, mock drills etc.) If a piece of equipment is going

on a call in another county and you will or may need mutual aid advise M.F.C. over the radio. 98 should not be used for these type events.

21. Always wait for a response from M.F.C. before giving your message.

22. Z.F.D. has a contract for All Schools and County Buildings. The O.I.C. should cancel Z.F.D. as soon as possible if they are not needed.

23. Radio checks should be kept to a minimum and should not be done when any other department is on a run.

EMERGENCY ALERTS FIRE FIGHTER IN TROUBLE

Mayday Mayday Mayday Firefighter in trouble\ lost\out of air

Officer in charge or Command Post owns the airway and directs rescue assignment of equipment and personnel

This is to be announced on the Fire ground and 33.98 Frequencies.

EMERGENCY EVACUATION

Solid or Long Air Horn Blast along with announcing Evacuation of area or structure on the radio.

All personnel to meet at the Command Post for accountability (PAR) and or follow the assignment given by the O.I.C.

This again is to be announced on the fire ground and 33.98 Frequencies

Structure Fire with People trapped or inside

Dispatch will send the next closes engine company and Zanesville Fire Department unless otherwise requested by the main department, along with the initial assignment as a R.I.C. team on initial dispatch

The O.I.C. should cancel departments not needed as soon as possible

Emergency traffic

Individual \ officer\ unit calling for emergency traffic all units yield all communications traffic so this person can transmit without interruption. This individual will advise when to clear the emergency traffic.

This is to be done on 33.98

P.A.R.

This for the personal accountability reporting system that should be called every 20 minutes by the safety officer when personnel are operating in the (I.D.L.H.) immediate dangerous to life and health area.

This is to be done on the frequency you are using.

If requested by the OIC MFC will call for PAR every _____ minutes

COMMON LANGUAGE SUGGESTIONS:

Working Fire or extrication

First unit on the scene to report size up of situation to dispatch. Dispatch is to repeat this size up. Working fire or extrication defines to the dispatch and incoming units that multiple tactics and goal must be accomplished to stabilize the incident.

Situation Contained

No additional equipment (other than what is responding or on the scene) is need to handle the incident. The situation is stable or under control with equipment assigned to the incident. If you do not need the incoming equipment let M.F.C. know and they will cancel it. MFC should repeat the message for all incoming units to hear.

R.I.C. Team

This is a Rapid Intervention Crew. This crew may be assigned to assemble tools-SCBA-Ropes-Thermal Camera-Ladder-Saws and stand by near the CP to be deployed in the event of a MAYDAY call or rescue should be needed on the emergency scene

Service Run

A request for the Fire or E.M.S. services of the department to assist or handle a non-emergency situation, on a temporary basis. (wires down, C\O alarm no illness , assist elderly, fuel spill, illegal burn and other minor problems)

Automatic Response A/R

Where two or more departments have agreed on a specific area these departments will be dispatched on all structure fires.

Dual Response

Where two or more departments have agreed on a specific area or structures that these departments will automatically be dispatched on the initial dispatch.

Mutual Aid

When a specific unit or officer is requesting additional units or equipment to be dispatched due to the nature of the incident or the inability to have adequate resources available to handle the incident. The O.I.C. should mark M.F.C. and specify what they want as mutual aid. The O.I.C. should cancel mutual aid as soon as it is not needed.

D.O.A.

Victim or patient is deceased

- 33.56 SE HARRISON AND WAYNE
- 33.60 SW NEWTON, ROSEVILLE, AND SOUTH ZANESVILLE

TO: Muskingum County Fireman's Association
FROM: M.C.F.A. Radio Committee
REF: Tone Guard
DATE: May 10,2001

The Radio Committee recommends that all Muskingum County Fire and EMS have their radio's equipped with PL tone 103.5 on the Tx. Side only at this time and have this completed by June 4st, 2001.

All channels being used in the county should have this same PL tone.

The Sheriff's office will install this PL in their 33.98 main station transmitter next week.

PL tones will be sent along with dispatch tones.

All Departments must have kick back tones in working order by June 4th

After each department has completed this first process they should notify Bo Keck at 454-1911 or fax 455-7911.

When all departments have completed step 1 the Sheriff will install RX PL and the Departments can either put Rx. PL on or continue carrier squelch.

Frequencies must be installed in the same order as per the letter from from the Association dated July 29, 1998 (see list below) and that the counties around us be notified of these changes.

We recommend that the departments utilized their county Fire and EMS monies for this project.

If you have any problem with this project contact Bo or any member of the committee.

- o 33.98 Main dispatch and communications channel
- o 33.66 Backup channel to communicate with dispatch
- o 33.44 North West Fire Ground
- o 33.64 North East Fire Ground
- o 33.56 SouthEast Fire Ground
- o 33.60 South West Fire Ground
